

FLYING WHALES: The LCA60T program

Using the latest aeronautic technologies, **FLYING WHALES**, develops the transport of the future for heavy & oversized loads.

With the ability to load/unload in hover flight, the **LCA60T (Large Capacity Airship 60 Tons)** opens new economic opportunities even in landlocked areas.

The LCA60T has multiple applications in logging industry and exceptional transports.

FLYING WHALES selected **EPSILON COMPOSITE** as one of the 5 partners in the LCA60T consortium, with the responsibility to design and manufacture the carbon composite structure of the airship, made of extra-large trusses.

EPSILON COMPOSITE carbon fiber pultrusion unique know-how, its ability de successfully lead complex and ambitious R&D projects as well as its experience in Aerospace were the main drivers in FLYING WHALES choice.
